**Description :**

Family Tent UNHCR type

**Technical Specification :**

Current Standard family tent used by UNHCR, ICRC and IFRC; the standard tent for a family of five conforms to the recommended minimum-standard living area for hot and temperate climates (3.5m<sup>2</sup> per person); it provides additional space for cold climates. As an addition, the Kit Improved insulation for family tent, is recommended for cold climates.

The tent is not a long-term habitat solution. It is meant for emergencies. It has a minimum 1-year lifespan, irrespective of climate. It has a minimum shelf-life of under normal warehousing conditions (in a dry, clean and ventilated warehouse – not in containers or tented warehouses – and stored on pallet racks or pallets elevated off the ground, not piled). The tent is vulnerable to rain and moisture when packed.

The tent design was developed to ensure a product fit for human use, ensuring the minimum required outdoor lifespan in all climates.
