

Product Name :
Wick Stoves

Product Code :
KGLOB22214033

Description :

Wick Stoves

Technical Specification :

Wick stoves work more or less through capillary actions. It is easy to use sturdy and durable. One of a kind, it is portable, safe to use and does not risk the explosion quotient either. The fuel is always in the tank below and the wick sucks up the fuel to provide heat energy to the contents that are placed above the stove. These stoves can be useful in emergency situations. Many clients have used these stoves and appreciated the function and quality.

The flammable substance is usually kerosene which is a hydrocarbon and a much-used fuel in the area. Maintain the flame does not require the wick to be pulled up again and again. It is made out of a strong metal to withstand high heat and temperature. It can be used for cooking purpose across domestic and commercial purposes too. These stoves are available at best price. We have never compromise on quality and this premium quality you can get within your budget.

The wick is usually made out of cotton and is supplied separately. The wick is usually broader and wider to provide even heat throughout the container. It even prevents the area from heating up unlike other heaters and stoves. It does not require extra effort like those of pump stoves which technically demand more precaution due to their unsafe nature.
