

Product Name :
Electric Heat Shrink Tunnel

Product Code :
KGLOB10271109

No image available

Description :

Electric Heat Shrink Tunnel

Technical Specification :

Type Fully and Semi both
Material SS 304
Power 24 kW
Voltage Up to 380 V

Electric Heat Shrink Tunnel is designed specifically for shrink sleeve labeling, tamper evident banding and moisture sensitive products. SVEST is designed dual-well, heavy gauge stainless steel. This construction specification lets hot air circulate for greatest efficiency while protecting operators from high heat. High-quality electric heating elements provide uniform heat distribution to ensure a quality finish on a number of films including PVC, PETG, OPS and PLA. Two independent air flow controls allow air flow in two separate ones. The almost infinite air flow adjustment paired with accurate, consistent digital temperature control make the an extremely versatile shrink tunnel.

Silent Features:

- High-quality electric heating elements to focus heat.
- High-speed convection blowers.

-
- Safe Double shell design keeps outer temperatures of machine cooler.
 - Energy saving insulation with cool to touch panels.
 - Two independently controlled heating zones.
